

Our machines are grouped into premium (with payment options, thus most suited for direct sale such as a farmyard) and Milk Dispenser (with simple push button operation, suitable for retail environment). Each can be tailored to suit individual circumstances, with range of tank sizes and features.

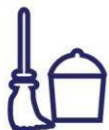

- All machines can monitor milk level and internal temperature. You can add in additional features to suit your needs, such as coin mechanisms, note readers or contactless card readers. All parts which come into contact with the milk in the filling area are chilled.
- The vending machine will be disabled when the cooling system exceeds the defined milk temperature for a specific time.
- The machine monitors and records temperatures. If there is a fault/issue and the internal temperature of the milk has exceeded the defined level, any payment will be automatically blocked.
- The machine will also be disabled if there is an extended power cut.
- After each filling process, the filling area is rinsed down. It is not necessary to have an external water connection.

Model options include both single and double tank systems, as well as a variety of tank sizes from 50 litres to 200 litres.

Machines are made to order and the normal leadtime is 6-8 weeks from point of order.

Our machines are manufactured entirely from 316 stainless steel for ease of cleaning and high standard of hygiene. Pipework within the machine need to be cleaned onsite, therefore you need to be able to get chemicals and hot water to site to complete the daily clean.

Requires only a single 13amp power supply for operation.

Coin Mechanism: This provides change, so customers are not restricted to having the exact money

Card Reader: This allows for contactless payment using credit or debit cards along with Apple and Google Pay

GSM Unit: This enables the machine to text a mobile phone with details of volumes of milk used/remaining and will provide reports for environmental health.

Premium 650

The 650 can have either two 50 litre tanks, one single 100 litre or 200 litre tanks.
Premium plus – allows two quantity buttons
DUO - The 650 premium duo differs only from the 650 premium by having two 50 litre tanks and two paddles. It can either draw one tank down at a time or draw both down together.

Dimensions W: 740mm D: 1030mm H: 2030mm
Starting cost: £5890

Premium 1300 (Duo or Quattro)

The premium 1300 is a double sized machine. The duo has two paddles and two tanks of either 100 litre or 200 litre capacity each, giving a total capacity up to 400 litres.
The quattro has four 50 litre tanks with automatic changeover from the first empty tank to the next full one.
Any combination of payment options can be added.

Dimensions W: 1480mm D: 1030mm H: 2030mm
Starting cost: £7500

Premium Bifluid (650 or 1300)

The bifluid machine is available as either a single 650 or a double 1300 version. Both allow two types of milk to be dispensed, for example full fat and semi skimmed.
Any combination of payment options can be added.

Dimensions W: 1480mm D: 1030mm H: 2030mm
Starting cost: £8290

Milk Dispenser Range

This range comes without any payment options. The basic milk dispenser has a simple push button operation system for one quantity of milk. The milk dispenser plus has two buttons, allowing two different quantity options. Both can be fitted with tanks of any size between 50 litres and 200 litres. There is also the option of a 1300 bifluid version.

Dimensions W: 740mm D: 1030mm H: 2030mm
