

The DF Italia range of milk vending machines is ideal for the direct sale of raw milk or pasteurised to the public. We supply a variety of models suitable for all your needs from the 100-litre version to the larger modular systems for 800 litres. These milk vending machines can be installed on farms, indoors, or outdoors, and most only require a simple electrical connection. All need to be within a shed so they are out of the most harsh of weather, both hot/cold wet and dry!

They're relatively maintenance free but require cleaning daily.

There are 5 models for vending machines. Each is custom built to meet the customer's needs, so you can tailor your machine to your requirements.

Extra tanks in varying sizes can be ordered and optional extras for all models are listed below. Which are on wheels which aren't

Machines are made to order and the normal leadtime is 10-12 weeks from point of order.

Our machines are manufactured entirely from 316 stainless steel for ease of cleaning and high standard of hygiene. Tanks and pipework are attached the wheeled tanks, enabling you to take the tanks away from the machine using chemicals and hot water to complete the daily clean off site.

Requires only a single 13amp power supply for operation.

Coin Mechanism: This provides change, so customers are not restricted to having the exact money.

Card Reader: This allows for contactless payment using credit or debit cards along with Apple and Google Pay

GSM Unit: This enables the machine to text a mobile phone with details of volumes of milk used/remaining and will provide reports for environmental health.
